Due to an unfortunate error in the publication process, Fig. 1 was printed in black and white. The correct colour figure is given below.

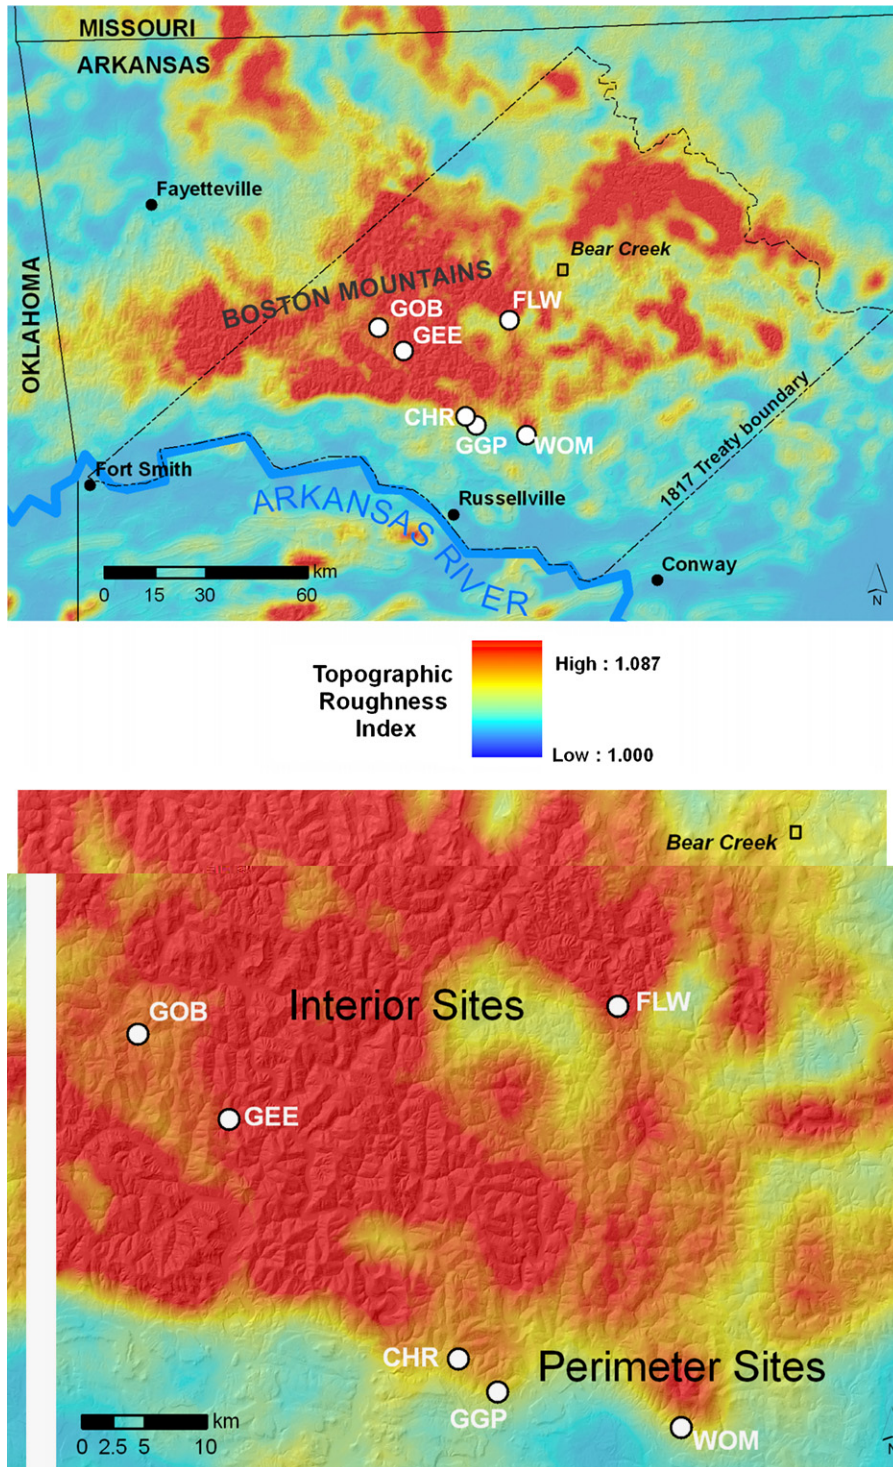

Fig. 1. Top: map of topographic roughness index (see Section 2 for explanation) for the northwest portion of Arkansas. Fire history study sites and codes are given in white (GOB = Gobbler's Knob, FLW = Falling Waters, GEE = Gee Creek). Codes for sites from a previous study are CHR = Chigger Road, GGP = Granny Gap, WOM = White Oak Mountain. This study's sites are located in the Boston Mountains in an area (dashed line) given by treaty to the Cherokee in 1817 (Pitcaithley, 1978). Bottom: this enlarged view of interior and perimeter Boston Mountains fire history sites shows the topographic roughness indices with hill shade and portrays the dissected topography of interior sites and the proximity of the perimeter sites to relatively smooth topography of the Arkansas River valley. The black square represents the region of former Cherokee settlement along Bear Creek.
